## WHY AQUA GENIUS?

### 1 - Global GreenTag™ Gold Certification

Global GreenTag™ is a labeling system which provides an independent assessment of the environmental and social efforts Billi has made in developing our products.

Simply, achieving Gold certification for Billi Eco, Quadra & Quadra Plus means that they are;

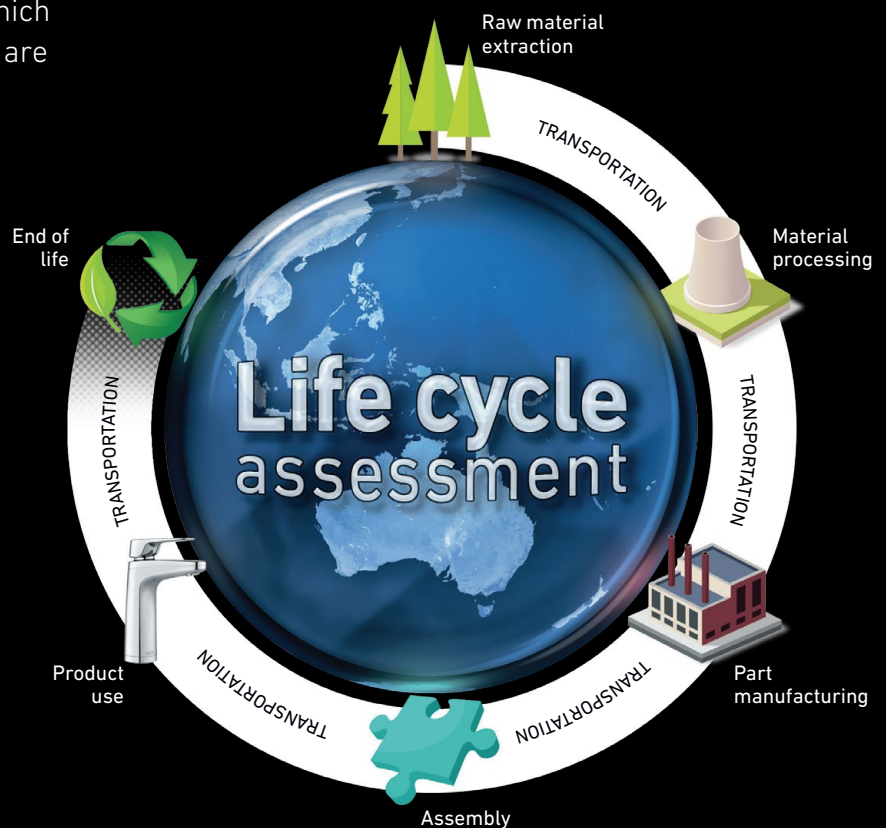

- Made the right way
- More energy efficient
- Will cost less to run
- Have the least impact on the environment

The process is extensive and included a full life-cycle assessment on the product which was just 1 of 6 categories that products are rated on, under the Global GreenTag™ certification system.

### 2 - Unique Heat Exchange Technology

Billi's unique heat exchange system is a process whereby heat generated during the chilling cycle is captured and reused to preheat the boiling water!

### 3 - Australian owned, designed and manufactured.

## DID YOU KNOW?

Billi locally manufactures Water Cooled & Air Cooled boiling and chilled drinking water systems? Both systems have unique benefits within certain applications - here is why:

### Water Cooled:

- **No cupboard ventilation** required
- **Energy Efficiency** - No energy wasting fans are required
- **Smaller** under bench unit dimensions
- **Quieter** operation
- **Longevity of life** expectancy. Compressors are constantly running at cooler temperature, which has a significant impact on healthy life expectancy.

### Air Cooled:

- **No water** used in the cooling process
- **Efficient in low use applications** (residential / small office). This is the reason why the smallest combined boiling and chilled system in the world (the Billi Eco) is Air Cooled as standard.

**Interesting Fact:** During a VIPAC testing period of 9 hours, it was noted that a Quadra Plus 9 water cooled system discharged 2.69 litres of water to drain... that's less than a 30 second shower!
